# How to Carve a Jack O' Lantern

by www.theteachersguide.com

Carving pumpkins into jack o' lanterns has been a favorite Halloween tradition for many years. It is believed the tradition started with the Celts long ago. They would carve out turnips to make lanterns. Pumpkins proved easier to carve than turnips and a tradition was born. Follow the steps below to create the perfect jack o' lantern.

First, decide what kind of design you want to carve on your pumpkin. This will help you choose a pumpkin that works with your plans. Next, pick a pumpkin that will work best with your design. Now you will need to gather all of your pumpkin carving supplies.

Now it is time to cut a lid for the pumpkin. Cut a rough circle around the stem of the pumpkin. Make sure to cut the top at a slant so the lid has an edge to rest on. After you remove the lid you can start taking the seeds and pulp out of

## Frog or Toad

(To leap or not to leap)

Do you know how to tell the difference between a frog and toad? Actually, a toad is a frog. Toads are members of the frog family, but are not what we consider "true frogs." Bullfrogs, green frogs, leopard frogs, and common frogs are "true frogs." American toads, Fowler toads, and common toads are what we call "true toads." Keep reading to find out the differences.

True Frog

"True frogs" and "true toads" are amphibians. Amphibians are cold-blooded vertebrates that spend part of their lives in bodies of water (or watery places) and part on land.

True Toad

**Pick up a "true frog" or "true toad" and you can feel the difference.** A frog has moist, smooth skin. A toad's skin is dry and bumpy or warty. The bumps are not actually warts and you cannot get warts from toads. Toads do know a cool trick, though. Their skin secretes a poison to stop bigger animals from eating them. (so remember, **DO NOT LICK THE TOADS!**)

Frogs have skinny, lean bodies. A toad's body is usually stocky and wide. Frogs have long, strong back legs and webbed feet. A toad has short back legs and not very much webbing on its feet.

Frogs and toads even move around differently. A frog takes long leaps, while a toad takes short hops. Both amphibians lay eggs in water. The eggs turn into tadpoles and then eventually into a young frogs or toads. The young frogs will usually stay close to the water, but a young toad will wander away from the water into a wooded or grassy area. The next time you see one of these wonderful creatures, take a minute to watch it and see if you can tell the difference.
